Unlimited, provided that the surface is dry and clean.

Film thickness, ventilation, temperature and relative humidity are of great influence on the drying times.

After 1 to 4 weeks, depending on the temperature and layer thickness.

Explanation: in order to avoid or reduce the risk of wrinkling, it is to be recommend to apply the 2<sup>nd</sup> layer of this product or a finish coat based on the same resin technology, within 4 hours or after 48 hours drying of the 1<sup>st</sup> layer.  
If necessary, please consult your supplier.

## Surface conditions

Steel

New steel:  
Blasting according to the ISO norm 8501-1:1988 Sa 2½.  
Roughness profile Ra 10-12 µm Rz 50-60 µm.  
Surface must be clean and dry.

Repair and maintenance:  
Clean the surface with a suitable cleaning preparation or by steam cleaning.  
Remove salts and other water-soluble impurity by spraying with clean tap-water under high pressure.  
Remove rust a.o. by (water)blasting Sa 2½ or derust mechanical until St. 2-3.

Apply the advised paint system on a clean surface.

- Mechanical or hand derusting gives less quality than (water)blasting and will result in less protection of the applied paint system.

## Safety description
